

## ISM3232C

### Lab 7: Testing (Part 1)

#### **Instructions**

For this assignment, you will Implement tests for the population service of WorldExplorer, the application from Module 6. After reading “Chapter 6: Introduction to Testing”, start with the section titled ‘Installing and configuring Jest’ and complete all coding through the section titled ‘Writing basic tests’.

Be sure your code compiles cleanly. Take screen snips of the test execution output.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

#### **Submitting your work**

Once your project is complete, commit your code and a PowerPoint file of multiple screen snips showing the test execution output to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.
